Are you curious to learn more about the fascinating Florida Stone Crab? Well, you're in for a treat! In this article, we'll take a deep dive into ten fun facts about this incredible crustacean. Did you know that 98% of stone crabs come from Florida? That's right, and we're fortunate to partner with amazing crabbers

inat's right, and we're fortunate to partner with amazing crabber in Florida who supply us with delicious, fresh stone crab claws every day.

But that's not all – we'll also explore their sustainable source, reproductive power, catching methods, and even some interesting tidbits about their eating habits. pounds of fresh Florida stone crab claws we serve to guests So, sit back, relax, and get ready to satisfy your curiosity about these magnificent creatures.

Fun Fact 1: Menippe mercenaria is the scientific name for Florida stone crab

Fun Fact 2: Two species of stone crabs exist in the Southeastern United States

Fun Fact 3: 98% of stone crabs come from Florida
Fun Fact 4: Stone crabs are a sustainable source(they regrow their claws)

Fun Fact 5: Only the claws are harvested, and they must be at least 23/4" Fun Fact 6: Female stone crabs can lay up to one million eggs
Fun Fact 7: Catching stone crabs

Fun Fact 8: Females live longer than males
Fun Fact 9: Stone crabs only have a few predators:horse conch,
grouper, sea turtles, cobia, and octopuse.

Fun Fact 10: Eating habits of Florida stone crabs: Oysters, mollusks, poly chaeth worms, other custaceans

SEA TURTLES

Did you know that sea turtles nest in the Everglades from May through August?

Park monitoring teams travel by boat to Cape Sable several times a week to look for sea turtle crawls along the 12 miles of beach.

A crawl is identified by a specific set of tracks that the female turtle makes in the sand as she looks for a suitable nesting location. Once a crawl is located, the team looks for the incoming crawl and the outgoing crawl, any predator tracks, and any clues to determine if the mother actually nested. Sea turtles lay an average of 105 eggs in each nest and one female can lay 2-5 nests per nesting season!

If she has successfully nested and laid her eggs, baby sea turtles should begin to hatch in about 55 days. Park staff will begin daily monitoring of the nest site for signs of a hatch out after 45 days of incubation and continue to monitor until day 70.

Once a nest shows signs of hatching, park staff waits three days before they excavate the nest and count the hatched (and unhatched) eggs, as well as to collect other measurements and data.

The main nesters on Cape Sable are loggerhead sea turtles. Occasionally, green sea turtles may nest or do a non-nesting emergence, also known as a false crawl. Sea turtles imprint on the beach they hatch out on, so hopefully we will see these hatchlings again in 30 years when they start nesting!

All work is done under FWC Marine Turtle Permit number MTP-24-213.

Celebrating 50 years of Big Cypress National Preserve

50th Anniversary Big Cypress 50th Anniversary 50th Anniversary logo courtesy of the Florida National Parks

Big Cypress National Preserve turns 50 in 2024!

Our story begins and ends with Mr. Nathaniel P. Reed, an environmentalist who led conservation fights throughout Florida and was a major proponent of the creation of the preserve. A number of special-interest groups and Reed fought (and succeeded) to stop the creation of 'The World's Largest Jetport', and to get Big Cypress designated as protected land. Reed went to Washington D.C. to watch Big Cypress National Preserve officially be signed into law and noticed that the Enabling Legislation of Big Cypress was on the bottom of the pile. Not content to be the second national preserve, he moved Big Cypress to the top of the stack and watched as Big Cypress became the first ever National Preserve in the National Park Service! Fifty years later, the preserve remains an outstanding place to experience the natural, scenic, and recreational wonders of South Florida! Big Cypress National Preserve, protects tall strands of Bald Cypress, lowlying estuaries lined with Mangrove Trees, and everything in between! With only inches to differentiate between habitats, Big Cypress is known to be one of the most ecologically diverse areas of the country and protects almost 730,000 acres of land in Southwest Florida. With so much to do and see there is an adventure for people of all abilities!

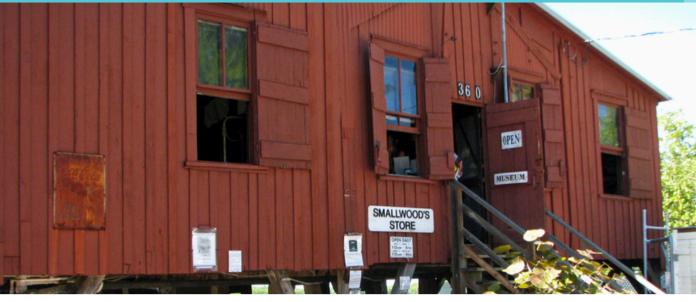

As a Preserve, Big Cypress protects not only the land, but also the traditional uses of the land. That includes Off-Road Vehicle usage, hunting and fishing, traditional use and occupancy by the Miccosukee and Seminole Tribes, private land ownership, prescribed fires and more! It is our responsibility to strike a balance between the natural and human agendas in order to protect this land, and its traditional uses for generations to come.

Throughout 2024, we invite you to celebrate with us and see first-hand what makes Big Cypress such an amazing place! Take a stroll on one of the four (4) boardwalks within the Preserve, take an Off-Road Vehicle into the backcountry, or get your feet wet on a swamp walk! No matter what you do, we know that you'll find something that interests you!

Things to See

Smallwood Store opened in 1906 when Chokoloskee was the Wild West and Ted Smallwood was a pioneer. This wooden building on an island was an Indian trading post, post office and general store to a small community of hardy and sometimes ornery individualists.

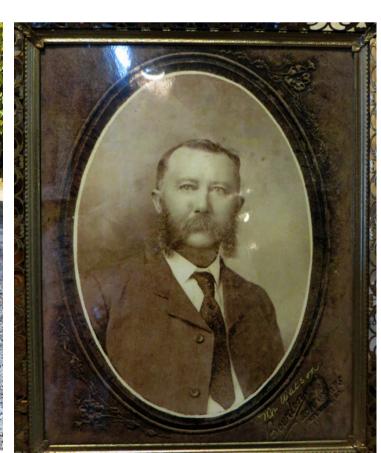

Smallwood's store was placed on the National Register of Historic Places in 1974. It remained open and active until 1982.

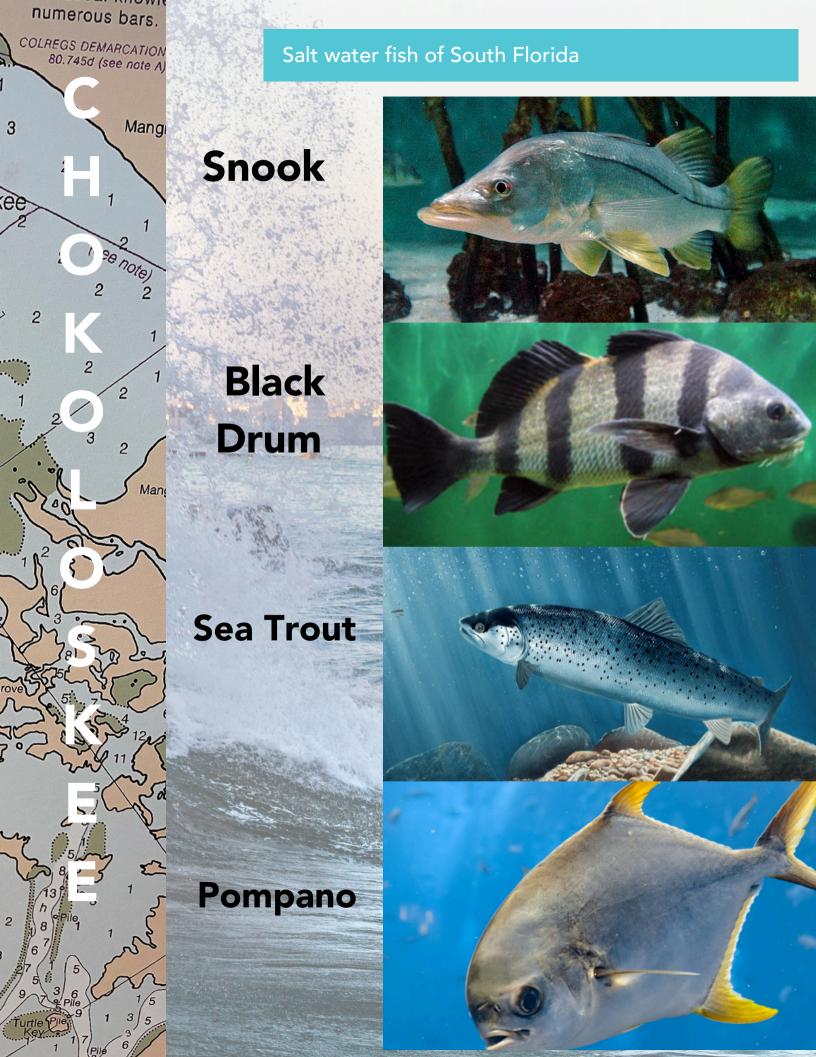

Store Hours:

Dec thru Apr 10am to 5pm May thru Nov 11am to 5pm

The infamous Mr. Watson, feared and revered throughout the 10,000 Islands met his end in a hail of bullets on the beach outside Smallwood's Store.

Happy Labor Day Everyone!!

Well as the summer is flying by & fall is just around the corner, many of our anglers are having great catches of Redfish the last couple of weeks. Some 10-20 fish days, using both live bait & artificials most of the reds have been on the outer islands from pavilion key south, along with the reds have been the snooks, they are in the same area's and some over slot fish in the mix. Remember the season is still closed until Oct1st. Sea trout fishing has been getting

shrimp under a float. The trout have been decent size 17 to 20 ", and with the holiday coming up it will be very busy on the water this weekend, so watch out for the

 $oldsymbol{\mathcal{L}}$ better as well. catching them on artificals & live

other guy and enjoy your holiday weekend!!

QUOTE OF THE MONTH

I always arrive late for work, but I make up for it by leaving early!
