#### Manager's Hot Topics

#### HAVE A QUESTION?

OFFICE (863) 956-1341 After Hours Emergency Number (689) 262-3648

Make checks payable to: OAK HARBOR VENTURE II, LLC

Mail to: 300 Oak Harbor CP Haines City, FL 33844

A 3% card fee will be added to payments made with a card.

Payment must be received on or by 5th of every month to avoid late fee. Just a friendly heads-up: the main road circling the neighborhood is a ONE-WAY street for cars and golf carts alike!

Speed limit is 10 MPH. Don't let your furry friends leave surprises behind!

The annual water report for Oak Harbor is now available. You can access it at all mailboxes, clubhouses, and at the conclusion of this newsletter.

As the Fourth of July approaches, we would like to remind all residents that the use of fireworks is strictly prohibited within the community.

The 360 home inspections will commence this month. Please ensure that your home is clean, including pressure washing as necessary. Additionally, maintain the lawn and flower beds, and ensure that there is no garbage or debris in the vicinity of or behind your home.

"Please be mindful that the A-frame and the yellow house located on the 'island' are <u>private</u> <u>rental properties</u>. Out of respect for the guests' privacy, we kindly ask that you refrain from exploring these areas."

# Save the Date

# <u>July 1<sup>st</sup> - 25<sup>th</sup> Christmas in July Trivia on FB</u>

Hop on over to Facebook and join the fun for our festive 25 Days of Christmas in July! Each day, we'll have a new holiday-themed challenge to spread cheer and keep the holiday spirit alive, even in the summer heat.

# July 4<sup>th</sup> Smores by the lake 8 PM

Smores by the lake 4<sup>th</sup> of July at 8 PM promises to be an evening full of nostalgia and camaraderie. Bring your marshmallow-roasting skills and gather around the crackling fire to create gooey, chocolatey treats while enjoying the company of friends old and new. It's the perfect way to celebrate Independence Day in a relaxed, joyful atmosphere.

# July 13th FB silly pets & animals day

On July 13th, jump onto Facebook and share a snap of your favorite silly pet or animal! One lucky winner will

be chosen for a sweet prize.

Greetings from OKH and the gang! Our mission? To jazz up your time at Oak Harbor and make it unforgettable. Picture a vibe that screams positivity, fun, and squeezing every drop of joy out of each moment. We've got a stellar lineup of activities and events in the works. But guess what? We're drafting you onto our team! Your ideas and volunteering spirit are like the secret sauce to making this shindig a smashing success. Swing by, say hello, and let's rock this party together!

#### 2024 Annual Drinking Water Quality Report Oak Harbor PWS ID# 3531275

We are pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and service we deliver to you everyday. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality or our water.

Our water source is ground water from two wells. Our wells draw water from the Floridan Aquifer. The water is disinfected with chlorine and delivered to your home. Oak Harbor routinely monitors for contaminants in your drinking water according to Federal and State laws, rules and regulations.

Except where indicated otherwise, this report is based on the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2024. Also included are test results in earlier years for contaminants sampled less often than annually. For contaminants not required to be tested for 2023, test results are for the most recent testing done in accordance with regulations authorized by the State and approved by the Environmental Protection Agency (EPA).

As water travels over land or underground it can pick up substances and or contaminants such as microbes, non-organic, organic chemicals and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants.

It is important to remember that the presence of these contaminants does not necessarily pose a health risk.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from other human activity.

In order to ensure that tap water is safe to drink EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Contaminants that may be present in source water include:

Microbial Contaminants, such as viruses and bacteria, may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic Contaminants, such as salts and metals, which can be naturally-occurring or results from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and Herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

Organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrials processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

Radioactive Contaminants, which can be naturally-occurring or byproducts of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking Water, including bottle water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contami nants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Page 2 of 3

"In 2024 the Florida Department of Environmental Protection performed a Source Water Assessment on our system. The assessment was conducted to provide information about any potential sources of contamination in the vicinity of our well.

There is two potential sources of contamination identified for this system from domestic wastewater with a low susceptibility level. The assessment results are available on the FDEP Source Water Assessment and Protection Program website at <a href="https://prodapps.dep.state.fl.us/swapp/">https://prodapps.dep.state.fl.us/swapp/</a> or they can be obtained from Oak Harbor Office (863) 956-1341.

Potential sources of contamination are those facilities, sites and activities that may affect the underlying ground water aquifers or nearby surface waters used for public drinking water supply. It is crucial to understand that these potential sources are just that – potential. Many are regulated by DEP or other agencies and operated under stringent construction and maintenance requirements designed to protect human health and the environment.

#### 2024 Analytical Results

Below, you may find unfamiliar terms and abbreviations. To help you better understand these terms we've provided the following definitions

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convin cing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs to not reflect the benefits of the use of disinfectants to control microbial contaminants.

'N/A" means does not apply.

"ND" means not detected and indicates that the substance was not found by laboratory analysis.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part by weight of analyte to 1 million parts by weight of the water sample.

Parts per billion (ppb) or Micrograms per liter ( $\mu g/l$ ) – one part by weight of analyte to 1 billion parts by weight of the water sample.

Picocurie per liter (pCi/L) - measure of the radioactivity in water.

\*\* Results in the Level Detected column for radioactive contaminants, inorganic contaminants, synthetic organic contaminants including pesticides and herbicides, and volatile organic contaminants are the highest average at any of the sampling points or the highest detected level at any sampling point depending on the sampling frequency. MCL Level Dates of Contaminant and Range of Violation sampling Detected MCLG MCL Likely Source of Contamination Unit of Measurement Results (mo./yr.) Y/N \*\* Radiological Contaminants Radium 226 + Radium 228 or Combined Radium 12/24 N 0.8 N/A 0 5 Erosion of natural deposits (pCi/L) **Inorganic Contaminants** Discharge from petroleum refineries; fire Antimony (ppb) 12/24 0.185 N N/A 6 6 retardants; ceramics; electronics; solder Erosion of natural deposits; runoff from Arsenic (ppb) 12/24 N 0.223 N/A 0 10 orchards; runoff from glass and electronics production wastes Discharge of drilling wastes; discharge from Barium (ppm) N 0.005 2 N/A 2 12/24 metal refineries; erosion of natural deposits Erosion of natural deposits; discharge from fertilizer and aluminum factories. Natural occurrence in soil Discharge from petroleum and metal Selenium (ppb) 12/24 N 0.109 N/A 50 50 refineries; erosion of natural deposits; discharge from mines

Sodium (ppm) 12/2	4 N	11.6	N/A	N/A	160	Salt water intrusion, leaching from soil
-------------------	-----	------	-----	-----	-----	--

#### Stage 2 Disinfectant/Disinfection By-Product (D/DBP) Contaminants

For chlorine, the level detected is the the highest running annual average (LRAA), computed quarterly, of monthly averages of all samples collected. For haloacetic acids or TTHM, the level detected is the highest LRAA, computed quarterly, of quarterly averages of all samples collected if the system is monitoring quarterly or is the average of all samples taken during the year if the system monitors less frequently than quarterly. Range of Results is the range of individual sample results (lowest to highest) for all monitoring locations, including Initial Distribution System Evaluation (IDSE) results as well as Stage 2 compliance results.

Contaminant and Unit of Measurement	Dates of samplin g (mo./yr.)	MCL Violation Y/N	Level Detected	Range of Results	MCLG or MRDLG	MCL or MRDL	Likely Source of Contamination
Chlorine (ppm)	1/24- 12/24	N	0.86	0.20- 2.12	MRDLG = 4	MRDL = 4.0	Water additive used to control microbes
Haloacetic Acids (five) (HAA5) (ppb)	7/24	N	3.8	N/A	N/A	MCL = 60	By-product of drinking water disinfection
TTHM [Total trihalomethanes] (ppb)	7/24	N	13	N/A	N/A	MCL = 80	By-product of drinking water disinfection

Haloacetic acids (five) (HAA5): Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer. TTHM [Total Trihalomethanes]. Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

Contaminant and Unit of Measurement	Dates of sampling (mo./yr.)	AL Violation Y/N	90th Percentile Result	No. of sampling sites exceeding the AL	MCLG	AL (Action Level)	Likely S	Source of Contamination

"Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula -fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. Oak Harbor is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove le ad from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact Oak Harbor office at 863-956-1341. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <u>https://www.epa.gov/safewater/lead.</u>"

We at Oak Harbor would like you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. If you have any questions or concerns about the information provided or want to obtain a copy of this report please call Oak Harbor Office **at. (863) 956-1341**.
